

After Completion of Endodontic Treatment

1. Your endodontic treatment has been completed. **Please contact your dentist for an appointment within 2-6 weeks to place a permanent restoration to protect your tooth.** Delaying this restoration may compromise the success of your root canal therapy or lead to tooth fracture requiring extraction
2. The tooth may be slightly tender for up to 2 weeks. If necessary, take an over-the-counter pain reliever such as Ibuprofen (Motrin/Advil) or Acetaminophen (Tylenol) as instructed.
3. If at all possible, **AVOID CHEWING** with this tooth until your dentist completes the final restoration - this will help prevent fracture of the tooth.
4. Your dentist will be notified that your endodontic treatment is complete, and a progress report will be sent along with your dental images. Please call your dentist to schedule the final restoration for your tooth.
5. You will receive a notice within 6-8 months to schedule a follow-up appointment to check on the healing of your tooth and surrounding tissue. There is **no additional fee** for this service.
6. Thank you for your cooperation during your treatment. If you have any questions or concerns, please don't hesitate to call us at any time.
